Dactinomycin for Injection

Section 1: Chemical Product and Company Identification

Product Name: Dactinomycin for Injection
Chemical Name(s): 2-Amino- 4,6-dimethyl- 3-oxo- 3H-phenoxazine- 1,9-dicarboxylic acid bis- [(5,12-diisopropyl- 9,13,16-trimethyl- 4,7,11,14,17-pentaoxo- hexadecahydro- 10-oxa- 3a,6,13,16-tetraaza-cyclopentacyclohexadecen- 8-yl)- amide] and Mannitol

Synonym: Dactinomycin for Injection
CAS Number: 69-65-8, 50-76-0
RTECS #: N/A
Trade Name: Cosmegen for Injection
Chemical Formula: C₄₃H₅₃NO₁₄

Contact Information:
X-GEN Pharmaceuticals, Inc.
PO Box 445, Big Flats, NY 14814
Technical Assistance: 607-562-2700
Online Assistance: www.x-gen.us

Emergency phone number: National Poison Control 1-800-222-1222

**For information regarding recommended uses and restrictions on usage refer to the product package insert.

Section 2: Hazard Identification

Hazard pictograms (GHS-US):
OSHA HCS 2012 • Acute Toxicity Oral 3
Label elements
OSHA HCS 2012

Hazard Overview: Toxic if swallowed. Contact Poison. Avoid contact with skin, mucous membranes, or eyes. Do not inhale the dust or vapor.

Prevention: Wash thoroughly after handling. Do not eat, drink or smoke when using this product.
Response

- IF SWALLOWED: immediately call a POISON CENTER/doctor. Specific treatment see supplemental first aid information. Rinse mouth.

Storage/Disposal

- Store at controlled room temperature of 20-25° C (68-77° F) according to Package Labeling instructions. Protect from heat, light and moisture. Storage consistent with chemotherapeutic pharmaceutical agents, such as secondary containment to minimize risk of spill or breakage, is appropriate. Dispose of content and/or container in accordance with local, regional, national, and/or international regulations.

Other Hazards

OSHA HCS 2012

Section 3: Composition and Information on Ingredients

Substances

- Material does not meet the criteria of a substance

Section 4: First Aid Measures

Description of first aid measures

Inhalation  • Move victim to fresh air. Administer oxygen if breathing is difficult. Give artificial respiration if victim is not breathing.

Skin     • In case of contact with substance, immediately flush skin with running water for at least 20 minutes.

Eye      • In case of contact with substance, immediately flush eyes with running water for at least 20 minutes.

Ingestion • Obtain medical attention immediately if ingested.

Most important symptoms and effects, both acute and delayed
• Refer to Section 11 - Toxicological Information.

**Indication of any immediate medical attention and special treatment needed**

**Notes to Physician**

• All treatments should be based on observed signs and symptoms of distress in the patient. Consideration should be given to the possibility that overexposure to materials other than this product may have occurred.

---

### Section 5: Fire Fighting Measures

**Extinguishing Media**

**Suitable Extinguishing Media**

- In case of fire use media as appropriate for surrounding fire.

**Unsuitable Extinguishing Media**

- No data available

**Special hazards arising from the substance or mixture**

**Unusual Fire and Explosion Hazards**

- This product is not flammable

**Hazardous Combustion**

- When involved in a fire, the products of combustion or thermal decomposition can include irritating fumes and toxic gases (e.g., carbon oxides, nitrogen oxides and hydrogen chloride)

**Advice for Firefighters**

- No special procedures are necessary. Firefighters should follow normal fire response procedures consistent with surrounding materials.

---

### Section 6: Accidental Release Measures

**Personal precautions, protective equipment and emergency procedures**

**Personal Precautions**

- Do not walk through spilled material. For small releases of this compound (1 vial), wear latex or butyl rubber gloves and safety glasses. In case of a large spill, trained personnel using pre-planned procedures should respond to large or uncontrolled releases. Proper protective equipment should be used, including light-weight glove underneath with heavy neoprene-type gloves as an over-glove, full body gown, and a Powered-Air Purifying Respirator (PAPR) equipped with a High Efficiency Particulate (HEPA) filter or Self-Contained Breathing Apparatus (SCBA).
Emergency Procedures

- In case of a large spill, clear the affected area and protect people. Stay upwind. Eliminate all ignition sources.

Environmental precautions

- Avoid run off to waterways and sewers.

Methods and material for containment and cleaning up

Containment/Clean-up Measures

- Stop leak if you can do it without risk.

For small releases of this compound (1 vial), wipe up spilled material with damp sponge or polypad. Place in a cytotoxic compound bag and hold for waste disposal. The spill areas then should be cleaned (three times) using a detergent solution followed by a clean water rinse.

In case of a large spill, clean-up or vacuum spilled solid (an explosion-proof HEPA vacuum should be used). Decontaminate the area of the spill thoroughly using a 5% trisodium phosphate (TSP) solution. A contact time with the TSP solution of 30 minutes is recommended. Place neutralized spill residue in an appropriate container and seal. Place all other spill residue in an appropriate cytotoxic compound container and seal.

Section 7: Handling and Storage

Precautions for safe handling

Handling

- Employees must be trained to properly use this product. Handle this material following standard medical practices and following the recommendations presented on the Package Labeling. As with all chemicals, avoid getting this material on you or in you. Conduct all open manipulations in a Class II Biological Safety Cabinet and use adequate personal protective equipment to minimize all exposure to this material in powdered and reconstituted form. Wear appropriate personal protective equipment, avoid direct contact. Do not eat, drink, smoke, or apply cosmetics while handling this product. Wash thoroughly with soap and water after handling and before eating, drinking, or using tobacco.

Conditions for safe storage, including any incompatibilities

Storage

- Store at controlled room temperature of 15-30°F (59-86°C) according to Package Labeling instructions. Store in secondary containment to minimize risk of spill or breakage, and to protect the environment.

Store in a cool, dry place away from light, heat and moisture. Storage consistent with chemotherapeutic pharmaceutical agents is appropriate.
Section 8: Exposure Controls / Personal Protection

Control parameters

Exposure Limits/Guidelines
• No applicable exposure limits available for product or components.

Exposure controls

Engineering Measures/Controls
• No open handling of powder or solutions of this product should occur. Admixtures or manipulations of this drug should be carried out in a cytotoxic drug safety cabinet or Class I or II Biological Safety Cabinet. The cabinet should be regularly cleaned following the manufacturer's recommendations and those of the NSF. HEPA filters in the safety cabinet should be changed per recommendations of the manufacturer or the NSF. The safety cabinet should be tested and certified as recommended by the National Sanitation Foundation in Standard Number 49. If appropriate, refer to Australian National Code of Practice for the Control of Workplace Hazardous Substances [NOHSC: 2007 (1994)] for further information.

Personal Protective Equipment

Respiratory
• A respirator is not required for routine conditions of use with a Biological Safety Cabinet, or glove box. If respiratory protection is needed, such as in a spill or other situation where the material may be airborne, use only protection authorized in the U.S. Federal OSHA Respiratory Protection Standard (29 CFR 1910.134) and equivalent U.S. State standards, Canadian CSA Standard Z94.4-93, the European Standard EN 529:2005 and Respiratory Protection Standards of EU member states, or the Australian Standard 1716-Respiratory Protective Devices and Australian Standard 1715-Selection, Use, and Maintenance of Respiratory Protective Devices. Oxygen levels below 19.5% are considered IDLH by OSHA. In such atmospheres, use of a full-facepiece pressure/demand SCBA or a full facepiece, supplied air respirator with auxiliary self-contained air supply is required under U.S. Federal OSHA’s Respiratory Protection Standard (1910.134-1998) or the regulations of various U.S. States, Canada, Australia, New Zealand, Mexico, or EU Member States.

Eye/Face
• Prevent all eye contact with the use of safety glasses or chemical splash goggles.
Skin/Body • Double glove, using butyl or nitrile-type rubber gloves or other appropriate gloves. Check gloves for leaks. Gloves should cover the gown cuff. Because all gloves are to some extent permeable and their permeability increases with time, they should be changed regularly (hourly is preferable) or immediately if they are torn or punctured. During patient administration, use of lightweight cotton gown or other medical attire is recommended to prevent all skin contact. For operations involving open material, additional protective clothing such as sleeve covers, shoe covers and body suits may be necessary. Additional protective clothing would be necessary for spill clean-up or other operations involving open material, such as sleeve covers, shoe covers and body suits.

Environmental Exposure Controls • Controls should be engineered to prevent release to the environment, including procedures to prevent spills, atmospheric release and release to waterways. Follow best practice for site management and disposal of waste.

**Section 10: Stability and Reactivity**

**Reactivity**
- No dangerous reaction known under conditions of normal use.

**Chemical stability**
- Stable under normal temperatures and pressures.

**Possibility of hazardous reactions**
- Hazardous polymerization will not occur.

**Conditions to avoid**
- Avoid heat, light, moisture and contact with incompatible chemicals.

**Incompatible materials**
- Incompatible chemicals such as acids, caustics.

**Hazardous decomposition products**
- If exposed to extremely high temperatures, the products of thermal decomposition may include irritating fumes and toxic gases.
